

SPG 1000

Multi functional TCIP / GPRS Security transmission module

Installation Recommendation:

The SPG 1000 is a very affordable cost effective solution to replace PSTN reporting by connecting existing control panel without any major change. SPG 1000 will capture Ademco contact ID signals and report it to the Central Monitoring station either GSM/GPRS or through Ethernet.

The SPG 1000 is a „motherboard” for the SPG 84 8 zone input, 4 zone control output security control panel which a small independent security panel. User SMS or E-mail reporting is possible from these inputs. SPG 1000 controls ethernet and GPRS channels and capable of sending e-mail and SMS messages.

Features:

- SIA IP DC9 protocol (SIA TCP/UDP/Encrypted, Closed socket)
- 24 hour connection with the server (min.test signal interval is 10 sec)
- DHCP / Fix IP
- Two server reporting as backup, DYN DNS server
- Web user and installer interface for programming or control
- Remote access through Ethernet network.
- Firmware upgrade
- 8/4 input/ output, Dallas iButton arming security plug on module
- Reporting Ethernet and GPRS failure
- E-mail and SMS sending
- SMS commanding
- Full functional 8 zone security control panel with SPG 84 expansion board (optional)
